PROFESSIONAL SUMMARY

Software Developer specializing in **Flutter and Dart application development with 1+ Years** at Sandspace Technologies Pvt. Ltd. Experienced in developing production mobile applications, enterprise HRM and CRM solutions, REST API integration, role-based application flows, responsive user interfaces, and state management using **GetX**. Strong hands-on experience with **Git, GitHub, JIRA**, branching, pull requests, collaborative development, issue tracking, debugging, testing, and Agile software development workflows.

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, Android Development, Firebase

Flutter Development: GetX, State Management, REST API Integration, Custom Widgets, Responsive UI, Navigation, Role-Based Application Flows, Push Notifications, Deep Linking, Clean Architecture

Version Control: Git, GitHub, Branching, Merging, Pull Requests, Conflict Resolution, Repository Management, Code Collaboration

Project & Issue Management: JIRA, Sprint Tracking, Task Management, Bug Tracking, Issue Management, Agile, Scrum

Databases: Firebase Firestore, MySQL, SQLite

Tools & Platforms: Android Studio, VS Code, Postman, Google Play Console

PROFESSIONAL EXPERIENCE

Software Developer – Flutter
Sandspace Technologies Pvt. Ltd.

Jul 14, 2025 – Present
Vijayawada, India

- Develop and maintain cross-platform applications using **Flutter and Dart**, working across application UI, business logic, REST API integration, state management, testing, debugging, and application release activities.
- Developed and contributed to **TEGA**, an e-learning application published on the Google Play Store with video learning, quizzes, push notifications, and role-based application functionality.
- Developed the organization's **HRM application**, supporting employee information, attendance, leave management, and administrative workflows.
- Worked on enterprise CRM solutions including **AO CRM**, supporting student lifecycle management and overseas education consultancy operations.
- Build reusable Flutter components and maintain structured application code using **GetX state management** and clean development practices.
- Integrate **REST APIs** and manage API responses, application states, navigation, authentication flows, error handling, and dynamic user interfaces.
- Use **Git and GitHub** extensively for daily development, including repository management, feature branches, commits, merging, pull requests, conflict resolution, and collaborative software development.

- Collaborate with developers through shared GitHub repositories, following structured version-control workflows for feature implementation, code integration, and issue resolution.
- Use **JIRA** for sprint planning, task tracking, bug reporting, issue management, progress updates, and coordination with team members in an Agile environment.
- Participate throughout the software development lifecycle, including feature development, debugging, bug fixing, testing, enhancements, and release activities.

Senior Developer Intern

K-Hub & Raj Reddy Center for Technology and Society (RCTS), IITH

Jan 2025 - Jun 2025

Kakinada, India

- Worked as part of a collaborative software development team on organization and client projects.
- Used version control and structured software development practices while coordinating development tasks with team members.
- Gained practical experience in software development workflows, debugging, implementation, testing, and team-based project delivery.

Android Development Trainer

Tech Teads

Jun 2023 – Dec 2023

Kakinada, India

- Trained students in Android application development, covering Kotlin, mobile UI development, Firebase, application architecture, and practical application development.
- Guided learners through hands-on Android application development, debugging, and project implementation.

PROJECTS

TEGA – E-Learning Application | *Flutter, Dart, GetX, REST APIs, Firebase, Git/GitHub*

- Developed a production e-learning mobile application using **Flutter and Dart**, published on the Google Play Store.
- Implemented learning features including video lessons, quizzes, notifications, authentication, and role-based user functionality.
- Used **GetX** for application state management, navigation, dependency management, and structured application flows.
- Integrated REST APIs and Firebase services for application functionality and data communication.
- Managed application development and source-code collaboration using **Git and GitHub**.

HRM – Human Resource Management Application | *Flutter, Dart, GetX, REST APIs, Git/GitHub*

- Developed an internal Human Resource Management application for Sandspace Technologies.
- Implemented employee information, attendance, leave management, and role-based administrative workflows.
- Built reusable Flutter UI components and managed application state using **GetX**.
- Integrated backend APIs and implemented structured navigation for employee and administrator roles.
- Used **Git and GitHub** for source-code management, feature development, branching, merging, and collaboration.

AO CRM – Overseas Consultancy CRM Platform | CRM, PostgreSQL, Git/GitHub, JIRA

- Worked on **AO CRM**, an enterprise CRM platform designed for overseas education consultancy operations.
- The platform enables complete tracking of a student's journey, including student information, counselling, university applications, communication, follow-ups, and reminders.
- Supports multiple role-specific dashboards including **Admin, B2B Partner, Telecaller, Marketing and Counselor**.
- Helps consultancy teams monitor student application progress, communication history, follow-ups, reminders, and related information from a centralized platform.
- Collaborated with the development team using **Git and GitHub** for source-control workflows and **JIRA** for task, sprint, bug, and issue management.
- The platform architecture uses **React** for the frontend, **Node.js** for backend services, and **PostgreSQL** for database management.

FBGL Ministries Android Application | Android Native, Firebase, AdMob

2021

- Developed an Android application supporting live video streaming, event management, notifications, and community communication.
- Integrated Firebase services for application data management and real-time notifications.
- Implemented multiple user-facing features, role-based functionality, and application navigation flows.

EDUCATION

B.Tech – Computer Science & Engineering (AI & Data Science)

Kakinada Institute of Engineering and Technology (KIET)

2021 – 2025

Kakinada, India

ACHIEVEMENTS

Published Production Application – Developed and contributed to the TEGA Flutter application published on the Google Play Store while working at Sandspace Technologies.

3x Hackathon Winner – Won three hackathons by developing software solutions under competitive and time-constrained environments.

CERTIFICATIONS

Senior Developer Intern Certificate – RCTS @ IIITH

Foundations of Modern Machine Learning – I-HUB @ IIITH

Dart – iNeuron

Python – iNeuron

Machine Learning with Go – Infosys

Summer Internship – IIITH
